eTrust™ Threat Management

The Power of Complete Protection

To secure today's infrastructures, organizations need to strengthen their current security practices to include a complete security management solution. The eTrust Threat Management solution from Computer Associates International, Inc. (CA) enables organizations to elevate their current defensive security practices to proactively protect against today's and tomorrow's threats. It defends against the latest threats, including viruses, malicious mobile code and server and network attacks, with automated updates backed by CA's Global Security Research Team. Additionally, CA's comprehensive threat management solution reduces business risk by holistically integrating protection across the entire IT fabric — servers, desktops, mobile devices, web and wired and wireless networks.

eTrust™ Threat Management

The Power of Complete Protection

The eTrust Threat Management solution addresses the latest security threats through a unique preventative and accelerated cure approach. These solutions detect, analyze, warn, prevent and cure attacks from all sources.

CA is the first company to offer *Threat ICE*, which *Isolates*, *Contains* and *Extinguishes* all enterprise threats. Because organizations need to proactively identify potential hazards:

- eTrust Threat Management detects and automatically **isolates** attacks throughout the network — backed by CA's global security research team.

- Threats are then **contained** to prevent further infection. For example, eTrust™ Antivirus *Virus Block* technology helps stop viruses dead in their tracks by universally preventing malicious content and virus attachments infiltrating business systems. Also, the unique *Watch and Patrol* technology of eTrust™ Intrusion Detection proactively prevents network threats and policy violations.
- CA's solutions **extinguish** threats, allowing uninterrupted business operations. With eTrust Threat Management solutions, organizations can adapt their security defense to any new situation — reducing security management costs.

eTrust Threat Management:

- Offers a **complete active threat management strategy** through its ability to Isolate, Contain and Extinguish (ICE) threats.
- Provides **centralized management**, including automated (“hands-free”) signature distribution to desktops and servers.
- **Defends against the latest threats**, including viruses, malicious mobile code, server and network attacks, with automated updates backed by CA's Global Security Research Team.
- Provides **baseline controls** for all servers.
- Delivers **comprehensive, holistic threat security event management**, including virus outbreaks, network policy violation and attack detection, server application vulnerabilities, across the wired and wireless enterprise, for CA and third-party products.

eTrust Threat Management:

- Reduces risk
- Decreases cost of protection
- Minimizes enterprise deployment risks

In combination with eTrust™ Identity Management, eTrust™ Access Management and the eTrust™ Security Command Center, eTrust Threat Management solutions provide unparalleled security management to meet the challenges posed by today's widely networked, heterogeneous assets and the forces that threaten to disrupt an organization.
